

Bio-Plugin™

APPSERVER / WEBSERVER

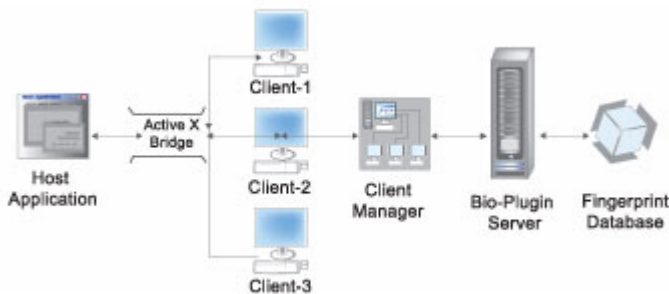

High-performance, enterprise-ready biometric system integration, without the SDK, in less than 24 hours.

Bio-Plugin™ AppServer and Webserver are completely developed, client/server fingerprint recognition systems that **rapidly integrate** into Windows and web based applications with minimal development effort. Due to its patent-pending integration methodology, Bio-Plugin™ is accelerating the rate of biometric adoption in the commercial marketplace.

Bio-Plugin Appserver:

Bio-Plugin Webserver:

A trusted biometrics R&D partner for best-of-breed technology, integration support, and ongoing business development.

When you partner with Data Securities for your fingerprint recognition technology needs, you aren't just purchasing a development package and left to fend for yourself. With each integration partner, we assign an experienced engineer to guide you through the process, provide all supporting documentation, and ensure the system is tested and working properly.

Bio-Plugin Benefits:

- Integrate a complete fingerprint system in less than a day
- No system dependencies between host and fingerprint software
- Avoid burdensome internal development and ongoing maintenance requirements
- Remain focused on core competencies
- Includes verification (1:1) and robust identification (1:N) software
- Compatible with WAN, LAN, CITRIX, and MS Terminal Services environments
- Integration with any web based application through web service interface

Sample Integrators:
