CASE STUDY: THE LEON COUNTY JAIL

Fingerprint Technology Used to Track Visitors and Prisoners

CASE STUDY

The Leon County Jail, located in Tallahassee Florida, houses pre-trial, pre-sentenced, county and state sentenced males and females, as well as juvenile offenders who have been adjudicated as adults. Their goal is to provide a safe, secure, functional and humane environment for staff and inmates, while protecting the local community. The jail has a running population of approximately 1100 inmates and processes about 130,000 visits every year.

The Leon County Jail

"We originally chose M2SYS for their sound product, fair price, and ease of implementation.

CHALLENGE:

The Leon County Jail was faced with the daunting task of tracking thousands of inmates and visitors at their facility as they moved through the building's various centers. As the volume increased, it was becoming more difficult and time-consuming to do so in an efficient and secure way.

Since then, we have used the M2SYS fingerprint solution to track over 20,000 inmates and visitors at The Leon County Jail. The implementation was as easy as advertised, and the solution has greatly exceeded our expectations! M2SYS support is excellent, their product features are superb, and their pricing competitive. We couldn't be more pleased!"

SOLUTION:

The integration of the Bio-Plugin fingerprint solution with their existing jail management application.

Hermon Davis
JIS Coordinator

BENEFITS:

The LCJ has achieved numerous benefits from the use of the M2SYS fingerprint biometric system. Not only has overall security improved, but Bio-Plugin has also increased reporting accuracy and greatly simplified the process used to track and manage both inmates and visitors to the jail.
